Small Office Connectivity

Useable right out of the box, the Aries is the fastest way to connect a small network to the internet. Just plug in a few cables, enter your Internet settings on the front panel, and the whole office is connected to the internet in minutes.

Features

Internet Gateway/Router

Share a single Internet connection with the whole office.

Web Cache

Enhance network performance and reduce Internet traffic by caching frequently accessed web pages.

Email Server

Consolidate and automatically send and retrieve email for the whole office using preset schedules.

File Server

Provide network storage for users to share files, documents, applications, and other critical data.

Web Server

Host your own website for the Internet on this server. You can also host websites on your intranet for collaboration.

Print Server

Share expensive peripherals such as high-speed laser printers.

DHCP Server

Automatically configure your network settings and services.

NAT (Network Address Translation)

Use a single IP address for the entire network. Hide computers on your private network from the public Internet.

Firewall

Protect your network from hackers and unauthorized intruders.

System Software

Operating System
Customized Linux OS.

Network Services

DHCP, DNS and NAT.

File and Print Services

Cross-platform file and print-sharing using SMB.
Shared folder access control.

Email Services

Supports POP3, IMAP4, SMTP, Multi-drop POP.
Mail queuing and scheduled mail retrieval.

Web Services

Apache Web Server with support for PHP scripting.
Caching Web Proxy.

Security

Easy-to-configure packet-filtering Firewall.

Wireless Networking (optional)

Built-in Wireless LAN Access Point software.
Requires supported IEEE 802.11b WLAN PCMCIA card.

Internet Access

Dial-up access using Serial or PCMCIA Analog (V.90) modem.
Dial-up access using Serial ISDN modem.
DSL modem or router connected to Secondary Ethernet.
Supports PPPoE.
Cable modem connected to Secondary Ethernet.
T1/E1 router connected to Secondary Ethernet.
Supports static or dynamic IP addresses and dial-on-demand.

Remote Access

Dial-in remote access using Serial or PCMCIA modem.
Virtual Private Networking using PPTP (supports Microsoft VPN Adapter under Windows 98SE or later).

Client Support

Windows 95/98/ME/2000 clients.
Apple Macintosh clients with System 7 or higher MacOS (using MacTCP or AppleOpen Transport)
Linux and Unix clients.

System Administration

Browser-based system administration tool.
Graphical LCD display and front panel controls.

International Language Support

English, Traditional Chinese, Simplified Chinese, Japanese, Korean, German, French, Spanish, Portuguese and Italian.

Quick and Easy Set-Up

Get your entire network up and connected to the Internet within 15 minutes. The complexities of setting up and maintaining a network has been shielded to provide you with a comprehensive interface for easy setup and maintenance; all done with just a few clicks of the mouse. If further assistance is required a friendly support specialist can remotely configure the Aries server via the Internet. It's as easy as it gets.

aries
Small Office Connectivity

Incredible Value

The Aries server is packed with features at a fraction of the cost of a traditional server.

It even supports 802.11b wireless networking without the need for an access point and requires no expensive MIS staff for set-up and maintenance. In addition it allows for license free use for an unlimited number of users. It also supports MAC, WIN, WIN 2000, NT, LINUX, UNIX clients.

Increase Productivity

With Aries everyone has email and Internet access. You will enhance intra-office communications and resource sharing. Even remote users can access your network through a secure VPN connection or dial-up.

Robust

The Aries Server uses the industry proven Linux OS. With it's "Set-and-forget" reliability and built-in network security you will spend more time using network and less time maintaining it.
